Table 1: VIC Table of Revisions

***** These headings to be double checked against template to ensure no topics missed *****

1 Project Drivers

1.1 The Purpose of the Project

The purpose of this project is to allow autonomous cars to identify and navigate intersections by providing an appropriate order to proceed through the intersection. Currently multiple autonomous cars arriving at an intersection at the same time have no decision protocol that will determine which car proceeds first through the intersection. **{{(From project goals)** VIC will allow autonomous vehicles to identify intersections and form a unanimous consensus of the order in which vehicles should proceed through an intersection. In addition, VIC will be able to dynamically handle changing scenarios at an intersection without running into deadlock or stalemate situations. To ensure safety, VIC will allow cars to navigate through the intersection only after a unanimous consensus has been made. }

1.2 The Client, the Customer, and Other Stakeholders

1.2.1 Client
